**Stand Alone or
POS Integrated Safes**

System Overview and Benefits

\$ All models automatically count and audit all cash inserted in a reliable fast MEI Bill Acceptor. Bills are stored in a lockable cassette that can't be accessed by the operator providing security for store personnel and the cash. For some applications a bulk note feeder option is available. The CashTrak™ 3 comes with 1 bill acceptor. For busy locations the CashTrak™ 3 dual has dual bill acceptors to enhance speed and provide backup.

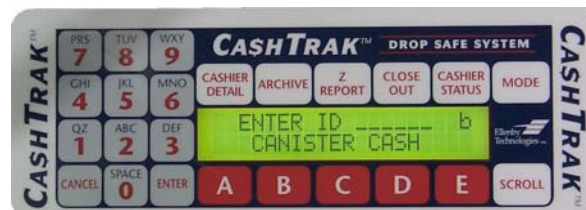

\$ The ability to function as a stand alone safe or integrate with POS hardware or back room software allows flexibility for current and future needs. An Ethernet interface or a wireless GSM Cellular communication option can be selected. The cellular option eliminates cabling and is available for the CashTrak™ 3 or 3 dual. Flexibility of design also offers integration into Kiosks.

System Overview and Benefits

\$ CashTrak™ patented 2 door design is standard with all models and provides service without access to money. Any rare occurrence of a bill jam can be cleared by local store personnel without accessing cash in the locked cassette. This eliminates the need for a costly field service visit.

\$ An intuitive durable easy to use keyboard is provided with all models and a thermal printer for reports is an available option.

\$ The capability to update new bills or software on-site with closed safe doors is standard with all models. Remote updating capability is also a feature with the entire CashTrak™ family.

\$ If required a riser base option is available to increase height of safe. The riser base for the CashTrak™ 3 dual includes a drop box slot for envelopes along with lock for security.

\$ Comprehensive service training is available providing self sufficiency. A diagnostic kit is provided to minimize field service calls and downtime.
